

AMENDMENTS TO THE CLAIMS:

The listing of claims will replace all prior versions, and listings, of claims in the application. Please cancel claims 2-4 and 7-9, and amend claims 1, 5, 6, and 10, as follows:

1. (CURRENTLY AMENDED) A communication device comprising:
- service designating means for designating a service,
- detection means for detecting communication devices capable of communicating with a local communication device;
- attribute information acquiring means for acquiring the attribute information of for the detected communication devices ~~detected by said detection means;~~ wherein said attribute information includes information regarding services capable of being provided by the detected communication devices;
- selection means for selecting, on the basis of the acquired attribute information ~~acquired by said attribute information acquiring means,~~ one or more of the detected communication devices capable of providing the designated service;
- ~~useful for the action of local communication device from the communication devices detected by said detection means; and~~
- display means for displaying a discrimination information for discriminating the communication device selected by said selection means; and
- application execution instruction sending means for sending instruction information for executing a predetermined application to the communication device displayed by said display means.

Claims 2-4 (CANCELED)

- 2017
02
5. (CURRENTLY AMENDED) A communication device according to claim 1 further comprising:
~~detection means for detecting communication devices capable of communicating with a self communication device; and~~
application execution instruction receiving means for executing a predetermined application when an instruction information for executing the application is received from one of the detected communication devices ~~detected by said detection means.~~
6. (CURRENTLY AMENDED) A communication method comprising:
designating a service;
~~a detection step of detecting communication devices capable of communicating with a self local communication device;~~
~~an attribute information acquiring step of acquiring the attribute information of for the detected communication devices detected by said detection step; wherein said attribute information includes services capable of being provided by the detected communication devices;~~
~~a selection step of selecting, on the basis of the acquired attribute information acquired by said attribute information acquiring step, one or more of the detected communication devices capable of providing the designated service; useful for~~

9.3 cont
~~the action of the self communication device from the communication devices detected
by said detection step; and~~

~~a display step of displaying a discrimination information for discriminating
the selected communication device selected by said selection step; and
sending instruction information for executing a predetermined application
to the displayed communication device.~~

Claims 7-9 (CANCELED)

8.17 AB
10. (CURRENTLY AMENDED) A communication method according to
claim 6, further method comprising:
~~a detection step of detecting communication devices capable of
communicating with a self communication device; and
an application execution instruction receiving step of executing a
predetermined application when an instruction information for executing the application
is received from one of the detected communication devices detected by said detection
step.~~
